CLAIM AMENDMENTS

Please amend claims 3, 39, 42, 46 and 51 as indicated below:

1. (Previously Amended) A method for providing venue-based data to hand held devices, said method comprising the steps of:

capturing video images from more than one perspective of a venue-based activity using more than one video camera; and

processing said video images into venue-based data formatted for wireless transmission via a wireless network for use by more than one hand held device each having a display screen adapted for simultaneously viewing more than one perspective of venue-based data captured by more than one video camera.

2. (Previously Amended) The method of claim 1 further comprising the step of:

transmitting said venue-based data to at least one hand held device having said display screen.

3. (Currently Amended) The method of claim 2 further comprising the step of:

providing said at least one hand held device as a hand held device adapted for use with a module that contains <u>at least one of electronics or access codes</u> that permit said at least one hand held to receive and display said venue-based data.

4. (Previously Amended) The method of claim 1 further comprising:

receiving said venue-based data at least one hand held device;

processing said data to provide more than one video perspective for simultaneous display on a display screen associated with said at least one hand held device, in response to receiving said data at said at least one hand held device; and

simultaneously displaying more than one video perspective on said display screen, thereby enabling a user of said at least one hand held device to view more than one video perspective at a time through said at least one hand held device.

5. (Previously Amended) The method of claim 1 wherein said at least one video camera is adapted to provide high-resolution wide-angle video data.

6. (Previously Amended) The method of claim 2 further comprising the step of:

transmitting data from said at least one venue-based data source through a transmitter associated with said at least one venue-based data source for transmission to said at least one hand held device.

7. (Previously Amended) The method of claim 2 further comprising the step of:

broadcasting said data to said at least one hand held device through wireless communications.

8. (Previously Amended) The method of claim 1 further comprising the step of:

transmitting said data from said at least one venue-based data source to said at least one hand held device through more than one a wireless transmitter associated with said wireless network.

9. (Original) The method of claim 8 further comprising the step of:

transferring said data through a wireless gateway associated with said wireless network.

10. (Previously Amended) The method of claim 4 wherein the step of displaying said processed data including more than one video perspective on said display screen, further comprises the step of:

displaying said processed data on said display screen, in response to user input through a user interface associated with said hand held device and

displaying a single video perspective on said display screen following a user selection of the single video perspective at said user interface.

- 11. (Previously Amended) The method of claim 10 wherein said display screen comprises a touch sensitive display operable for the user selection.
- 12. (Previously Amended) The method of claim 4 wherein the step of displaying said processed data on said display screen, further comprises the step of:

displaying a single video perspective of said venue-based activity on said display screen, in response to a user selection of said single video perspective of said venue activity using a user interface.

13. (Previously Amended) The method of claim 1 further comprising the step of:

processing said data for display on said display screen associated with said at least one hand held device utilizing at least one image-processing module.

- 14. (Original) The method of claim 1 wherein said venue-based data comprises real-time video data.
- 15. (Original) The method of claim 1 wherein said venue-based data further comprises instant replay video data.

16. (Original) The method of claim 1 wherein said venue-based data further

comprises promotional information.

17. (Original) The method of claim 1 wherein said venue-based data further

comprises advertising information.

18. (Previously Amended) A method for wirelessly transmitting venue-based data

to at least one hand held device having a display screen, said method comprising

the steps of:

wirelessly transmitting venue-based data including video to at least one hand

held device from at least one venue-based data source;

processing said venue-based data to provide processed data including more

than one video perspective for display on said display screen associated with said at

least one hand held device; and

simultaneously displaying more than one video perspective processed data

on said display screen of said at least one hand held device, thereby enabling a user

of said at least one hand held device to view more than one video perspective at a

time through said at least one hand held device.

19. (Previously Amended) A method for transmitting more than one perspective of

captured at a venue-based activity to hand held devices through a wireless

network, said method comprising the steps of:

capturing video images from more than one perspective of a venue-based

activity using more than one video camera;

processing said more than one perspective for display on a display screen

associated with said hand held device; and

Page 5 of 27 Serial No. 09/902,348 simultaneously transmitting more than one perspective of a venue-based activity to a-hand held devices from at least one venue-based data source, thereby enabling a user of said hand held device to simultaneously view venue-based perspectives through said hand held device.

20. (Previously Amended) A method for displaying a particular perspective of a venue-based activity at a hand held device having a display screen, said method comprising the steps of:

simultaneously capturing a plurality of video perspectives of a venue-based activity utilizing more than one camera;

processing said plurality of video perspectives for display on a display screen associated with said hand held device;

wirelessly transmitting to said a hand held device said plurality of video perspectives of a venue-based activity from said at least one venue-based data source;

simultaneously displaying more than one video perspective on said display screen; and

displaying a particular video perspective on said a display screen, in response to a user selection of said particular video perspective from among said more than one video perspective.

21. (Previously Amended) A system for providing venue-based data to a hand held devices, said system comprising:

at least one transmitter adapted for transmitting video from said at least one venue-based data source to said hand held devices adapted with a display screen for simultaneously displaying more than one video perspective captured at an entertainment venue.

22. (Previously Amended) The system of claim 21 further comprising:

processor for processing said video for display on the display screen associated with at least one hand held device.

23. (Previously Amended) The system of claim 21 wherein said at least one venuebased data source comprises a wireless gateway.

24. (Previously Amended) The system of claim 21 wherein video captured by at least one video camera is adapted to provide high-resolution wide-angle video data.

25. (Previously Amended) The system of claim 21 wherein:

said video is captured by at least one wireless video camera.

26. (Previously Amended) The system of claim 21 further comprising:

at least one video camera associated with said transmitter adapted for broadcasting video data from said at least one venue-based data source to said at least one hand held device, wherein said at least one hand held device is located within a venue.

27. (Previously Amended) The system of claim 21 wherein said transmitter further comprises:

a wireless gateway for transferring said data through a wireless local area network to said at least one hand held device.

28. (Previously Amended) The system of claim 27 wherein said hand held device is adapted with a touch sensitive display screen operable as a user interface.

29. (Previously Amended) The system of claim 21 further comprising:

a security module for securing said data prior to transmission by said

transmitter.

30. (Previously Amended) The system of claim 21 further comprising:

an encryption module for encrypting said data prior to transmission by said

transmitter.

31. (Previously Amended) The system of claim 21 wherein said venue-based data

comprises video replays.

32. (Previously Amended) The system of claim 21 wherein said venue-based data

further comprises instant replay video data.

33. (Original) The system of claim 23 wherein said venue-based data further

comprises promotional information.

34. (Original) The system of claim 23 wherein said venue-based data further

comprises advertising information.

35. (Previously Amended) A system for wirelessly transmitting venue-based data in

packets to venue-based wireless hand held devices, said system comprising:

at least one processor for processing data captured by at least one venue-

based video camera into data packets for transmission to remote wireless hand held

devices, wherein said wireless hand held devices each comprise a display screen for displaying said data; and

at least one transmitter for wirelessly transmitting said data packets to a said remote wireless hand held devices.

36. (Previously Amended) The system of claim 35 further comprising:

at least one security module for encrypting said data prior to said transmitting of said data to said wireless hand held device by said at least one transmitter.

37. (Previously Amended) A system for transmitting more than one video perspective of a venue-based activity for display at at least one hand held device located at said venue, said system comprising:

a server for processing data representing said more than one video perspective captured by more than one venue-based video camera for transmission to said at least one hand held device, wherein said at least one hand held device is associated with a display screen for displaying said data; and

a wireless gateway for transmitting said more than one video perspective to said at least one hand held device.

- 38. (Original) The system of claim 37 further comprising a security module for encrypting said data prior to transmission by said wireless gateway.
- 39. (Currently amended) The system of claim 37 further comprising a module that contains at least one of electronics or access codes that permit said at least one hand held device to receive said data representing said at least one video perspective captured by said at least one venue-based video camera, wherein said at least one hand held device is adapted for use with said module.

40. (Previously Submitted) The system of claim 39 wherein said module comprises

a smart card.

41. (Previously Submitted) A system for providing venue-based data including video

to hand held devices located within an entertainment venue, said hand held devices

including a single video display, a user interface, a wireless transceiver and having a

slot adapted for receiving a removable module, said system comprising:

more than one video camera simultaneously capturing video images at the

entertainment venue;

a processor for processing said video images with encryption coding, wherein

said video images are encrypted prior to broadcasting of said video signals to the

hand held devices located within the entertainment venue;

at least one transmitter for transmitting encrypted video signals to the hand

held devices for selective display on the single video display associated with the

hand held devices located within the entertainment venue;

at least one receiver for receiving service requests from the hand held

devices located within the entertainment venue; and

at least one server for processing the service requests received from the

hand held devices located within the entertainment venue.

42. (Currently amended) The system of claim 41 further comprising a removable

module that contains at least one of electronics or access codes that permit said at

least one hand held device to receive said data transmitted by said at least one

transmitter.

43. (Previously Submitted) The system of claim 42 wherein said removable module

comprises a smart card.

44. (Previously Submitted) The system of claim 41 wherein said at least one server

is adapted for processing at least one concession order as a part of said service

requests.

45. (Previously Submitted) A system for providing venue-based data to wireless

personal digital assistants, said system comprising:

more than one venue-based camera, wherein each of said more than one

venue-based camera is adapted to capture a different video perspective within an

entertainment venue;

a data processing system adapted for receiving, processing and transmitting

video perspectives received from more than one camera for simultaneous display at

a single display integrated with at least one wireless personal digital assistant

located within the entertainment venue.

46. (Currently amended) The system of claim 45, said at least one personal digital

assistant further comprising a removable module that contains at least one of

electronics or access codes that permit said at least one personal digital assistant to

receive said video perspectives transmitted by said data processing system.

47. (Previously Submitted) The system of claim 46 wherein said removable module

comprises a smart card.

48. (Previously Submitted) The system of claim 46 wherein said module comprises

a removable cartridge that provides decryption codes to enable said at least one

personal digital assistant to receive video perspectives from said data processing

system, if said video perspectives are encrypted.

Page 11 of 27 Serial No. 09/902,348 49. (Previously Submitted) The system of claim 46 wherein said removable module

further comprises a plurality of tuners integrated with said at least one personal

digital assistant, wherein said plurality of tuners are activated by at least one

personal digital assistant to receive video perspectives transmitted from said data

processing system for display at a display screen associated with the at least one

personal digital assistant.

50. (Previously Submitted) A system for providing venue-based data to wireless

telephone, said system comprising:

more than one venue-based camera, wherein each of said more than one

venue-based camera is adapted to capture a different video perspective within an

entertainment venue;

a data processing system adapted for receiving, processing and transmitting

video perspectives received from more than one camera for simultaneous display at

a single display integrated with at least one wireless telephone located within the

entertainment venue.

51. (Currently amended) The system of claim 50, said at least one wireless

telephone further comprising a removable module that contains at least one of

electronics or access codes that permit said at least one wireless telephone to

receive said video perspectives transmitted by said data processing system.

52. (Previously Submitted) The system of claim 51 wherein said removable module

comprises a smart card.

53. (Previously Submitted) The system of claim 51 wherein said module comprises

a removable cartridge that provides decryption codes to enable said at least one

wireless telephone to receive video perspectives from said data processing system, if said video perspectives are encrypted.

54. (Previously Submitted) The system of claim 51 wherein said removable module further comprises a plurality of tuners integrated with said at least one wireless telephone, wherein said plurality of tuners are activated by at least one wireless telephone to receive video perspectives transmitted from said data processing system for display at a display screen associated with the at least one wireless telephone.

55. (Previously Submitted) The system of claim 21 wherein said transmitter further comprises:

a wireless transmitter for transmitting said data in packets through a wireless network to said at least one hand held device.

56. (Previously Submitted) The system of claim 26 wherein said processed data is displayable on said display screen, in response to user input through a user interface associated with said hand held device.
